Adhesion
  chemistry of 3-32
    bonds 10-20
    fractures 20-31
    molecular structure hypothesis 4-9
Adsorbate-induced states
  Schottky barrier
    defect levels pinning 314, 315
    MIGS pinning 314-315
    two-state systems 316
Advanced unified defect model (AUDM) 313-314
Al-Ge interface
  coverages and 317-326
    charge densities 320-321, 322
    charge distribution 325
    densities of states 322-324
    M-S bond formation and 320-325
    MIGS 325-326
    multilayer and electronic structure 320-326
    submonolayer and overlayer metallization 317-319
  Fermi level pinning, different coverages 326-329
  Schottky barrier metallization 316-329
  submonolayer coverage and overlayer metalization 317-319
    Fermi level pinning, different coverages 326-329
    multilayer coverage and electronic structure 320-326
Alkali metal-semiconductor interface
  adsorption sites 332-333
    K double layer 335-336
    stability of 334-335

THE PHYSICS OF METALS AND METALLOGRAPHY

FIZIKA METALLOV I METALLOVEDENIE

Translation Editor: **BRIAN RALPH,** *Department of Materials Technology, Brunel University, Uxbridge, Middlesex UB8 3PH, UK*

This journal is a cover-to-cover translation of the Russian journal *Fizika Metallov i Metallovedenie*, and is published in collaboration with the Board of Governors of *Acta Metallurgica et Materialia.*
It describes theoretical problems and experimental investigation into the physical properties of metals and alloys, and contains studies of phenomena occurring during all phases of manufacture and in the metals in actual use in various applications.

PROGRESS IN QUANTUM ELECTRONICS

AN INTERNATIONAL REVIEW JOURNAL

Executive Editor: **P T LANDSBERG,** *Faculty of Mathematical Studies, University of Southampton, Highfield, Southampton, SO9 5NH, UK*

Progress in Quantum Electronics covers a diverse collection of topics, many of which now have well established technological applications but all of which contain a wide variety of problems and techniques in the realm of pure science. It is mainly concerned with the broad field of interaction of radiation and matter, e.g. in lasers or photodetectors, but also includes solid state topics such as superconductivity and quantum effects in semiconductors.

INTERNATIONAL JOURNAL OF IMPACT ENGINEERING

Editor-in-Chief: **NORMAN JONES,** *Department of Mechanical Engineering, University of Liverpool, PO Box 147, Liverpool L69 3BX, UK*

The *International Journal of Impact Engineering* publishes original research work concerned with the response of structures and bodies to dynamic loads arising from exposure to blast, collision or other impact events. The topics encompassed by the journal include the elastic and plastic response of structures and bodies to impact and blast loading, terminal ballistics, vehicle crashworthiness, containment and other processes and phenomena in which effects due to impact predominate, such as explosive welding. In addition, related matters such as research into fire hazards in association with impact loads will be included. Every paper accepted must contribute to the understanding of impact phenomena or the insight for engineering design in areas of high rate loading.
